TITLE JOURNAL

COMMENT

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches a local database that includes entries from dbSTS, GDB, and

Incal mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.

University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA comment Submitted by: Submitted by: Genome Sequencing Center Department of Genetics, Washington University, St. Louis, MO 63108, USA e-mail: rwilson@watson.wustl.edu MAPPING: Clones were assigned to the YAC map by hybridization by M. Lodhi, Cold Spring Harbor Laboratories, and fingerprinted by M. Marra, WashU, to pick the best candidates for sequencing.	NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions. This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chamistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one ml3 subclone.	The 5' clone is T020D01; 3' clone is F028I16. Actual start of this clone is at base position 1 of T29J13; actual end is at 100592 of T29J13. FEATURES Location/Qualifiers Yorganism="Arabidopsis thaliana" /OBLITYNE="Columbia" /OBLITYNE="Columbia" /OBLITYNE="Columbia" /OBLITYNE="T29J13" /OLOGE="T29J13" /ORGIN Alignment Scores:	US-09-830-837-6 (1-1052) x T29J13 (1-100592)

The orientation of the sequence is from T7 to SP6 of the PAC clone. Genes were predicted from the integrated results of the following:senschal.0, BLASTNI.4, BLASTNI.0 as well as SplicePredictor (October1998 version). The genomic sequence was searched against the non-redundant database NRP(PTR,SWTSSPROT, GENPERT, PDB) from MARF DNAbank and the CDNA sequence database at RGP. Protein similarities of the cording regions were searched against NRP with BLASTP2.0. ESTs represent the identified cDNA sequences using BLASTNI.4 with the corresponding DDBJ accession no. Sequence updated (17-Jun-1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /translation="WAHLSISLSLEFEDSNAKVLPGGARRSTSLSYGLLDRFREARWG

Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammallai, Eutheria, Primates, Catarrhini, Hominidae, Homo.	Seg Unp	2 Dasss 1 to 214287) DOE Joint Genome Institute. DIECT Submission Direct Submission	JOURNAL SUBMITTED (11-Ark-2000) Frouncing sequencing starts, 25 55.25 COMMENT On Jan 12, 2002 this sequence version replaced gi:13786410. Sequence Ouglity Assessment:	This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero.	Quality levels above 40 are expected to have less than 1 error in 10,000 bp. pace by the mainty values are not generally visible from the	GenBank Tat, file format but are available as part of this entry's ASN.1 file.	Sequence Quality Assessment: This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.	All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than	1 error in 10,000 bp. Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.	* NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. Gaps between the contigs.	* are represented as fulls of N. The older of the sizes: * is believed to be correct as given, however the sizes: * of the gaps between them are based on estimates that have * provided by the submittor.	* This sequence will be replaced * by the finished sequence as soon as it is available and * the accession number will be preserved. * 10563 - contin of 9563 bp in length	* 9564 9663: gap of unknown length * 9664 26317: config of 16654 bp in length	42789: contig 42889: gap of	214287: contig cation/Qualifier: .214287	/organism="Homo sapiens" //db_xref="f=xxon:9606" //chromosome="1606" //chromosome="1606"	/CLUME= RAIL-303A3 BASE COUNT 57135 a 53978 c 52644 g 50229 t 301 others ORIGIN	ent Scores:	Score: 728.00 Matches: 269 Score: 728.00 Conservative: 8 Conservative: 8 Mismatches: 19 Mismatches: 19	TO:OT
